## RF PIN Diodes - Dual, Common Cathode in SOT-323

## DESCRIPTION

Characterized by low reverse capacitance the PIN diodes BAR64V-05W was designed for RF signal switching and tuning. As a function of the forward bias current the forward resistance (RF) can be adjusted over a wide range. A long carrier life time offers low signal distortion for signals over 10 MHz up to 3 GHz . Typical applications for these PIN diodes are switches and attenuators in wireless, mobile, and TV-systems.

## FEATURES

- High voltage current controlled RF resistor
- Small diode capacitance

- Low series inductance
- Low forward resistance
- Improved performance due to two separate dice
- Base P/N-E3 - RoHS-compliant, commercial grade
- Material categorization: For definitions of compliance please see www.vishay.com/doc?99912

## APPLICATIONS

- For frequencies up to 3 GHz
- RF-signal tuning
- Signal attenuator and switches
- Mobile, wireless and TV-Applications
